Datacubed Health

Cycle-Based eCOA/ePRO
Built for Flexibility, in Oncology & Beyond

DISCOVER A TAILORED SOLUTION FOR YOUR TRIAL

Datacubed Health is revolutionizing the eCOA/ePRO landscape with specialized solutions that put your experience first. Our technology is built to address the unique challenges of oncology clinical trials with unparalleled flexibility and customization. By including the ability to adapt rather than requiring the traditional linear visit-based model, our tool fits your trial, not the other way around.

Improving the Trial Experience for All

We've built our platform to address the real-world needs of everyone involved in research, every step of the way.

Your trial is unique. Choose an eClinical platform that is made for you.

For Patients

Patient experience is central to clinical trials, and our platform is tailor-made to retain patients and give them the best possible care:

- Access to a wealth of knowledge and education
- Easy communication with clinicians
- Alignment with expectations around care, reducing confusion and fear
- Built by behavioral science experts to maintain engagement and promote active participation

For Sites

Our deep understanding of what sites need allows busy personnel to more easily focus on what matters most — patient care and safety:

- Streamlines workflows
- User-friendly interface minimizes clicks and maximizes efficiency
- Accommodates a wide range of visit types with flexible scheduling
- Tailored data collection

For Sponsors

Sponsors can rest assured that their trials will run smoothly, with full oversight throughout the process:

- Unprecedented visibility into trial progress
- Comprehensive, customized trial specific reporting and alerts
- More accurate monitoring of treatment responses, adverse events, and overall time line
- Enables data-driven decision-making

DATACUBED.COM

BENEFITS ACROSS THERAPEUTIC AREAS

In addition to supporting oncology research, our platform is ideal for any other therapeutic area benefitting from a study specific eClinical solution, including:

- Diabetes
- Cardiovascular conditions
- Arthritis
- Mental health conditions
- Rare diseases
- Central Nervous System (CNS)
- Metabolic
- And more

Personalized Platform Design & Implementation

We take a customized approach for every one of our partners:

1. Starting With Your Needs

We believe that any technology must start with a complete understanding of the problems that it must solve. With this purpose in mind, we begin by determining the specifics of your trial and what you are looking for in an eClinical solution.

2. Setting Expectations

We establish your time line, protocol requirements, materials needed, and regulatory considerations, then assemble an expert team to address these factors.

3. A Collaborative Design Process

Our team will work closely with you to evolve designs, workflows, and prototypes while ensuring continued alignment with your expectations.

4. Testing & Implementation

The process culminates in a user acceptance test to ensure the platform delivers your ideal experience. After this, it can be deployed for release.

5. Continued Training & Support

Our experts are here for you after implementation, ensuring all your team members can use the platform to its fullest potential.

Experience a truly customized eCOA/ePRO platform that is made for the nonlinear progression of oncology research.

EXPLORE OUR SOLUTIONS

ABOUT DATACUBED

Datacubed Health is a pioneering eClinical technology company built from the ground up by industry veterans who wanted to create a better clinical trial experience for all stakeholders. Our eCOA/ePRO solutions are infused with behavioral science principles designed to be inclusive, drive compliance, and greatly improve retention. We strive to deliver the best experience for you and your patients through ease of use and flexible technology that is configurable to your needs.
